

PAID OPPORTUNITY TO PARTICIPATE IN A RESEARCH PROJECT

Project description

We have a unique paid opportunity for you to get involved in a research project at the Second Faculty of Medicine, Charles University. The project aims to explore the social mechanisms leading to inequalities in cognitive health, particularly in Central and Eastern Europe.

Your participation in the project would involve conducting review of the literature, descriptive, and statistical analysis of data from the SHARE (The Survey of Health, Aging and Retirement in Europe) cohort, which includes over 140,000 older adults from 28 European countries. The project focuses on importance of less-explored factors, such as political persecution and life-time stress.

You will have the opportunity to develop your knowledge of modern epidemiological methods and collaborate with experienced researchers with international experience. Further, you will be able to contribute to scientific publications.

Project Benefits for Your Career

- Gain practical research experience in the field of social epidemiology..
- Obtain mentoring and guidance from experienced researchers with international experience.
- Collaborate on preparation of scientific journal publications
- Opportunity to present results at scientific conferences

If you are interested in participating in this project, please send your resume to Dominika James Šeblová, PhD
