Aromatic compounds

- delocalization of π -elektrons

- more resonance structures

- planar molecules

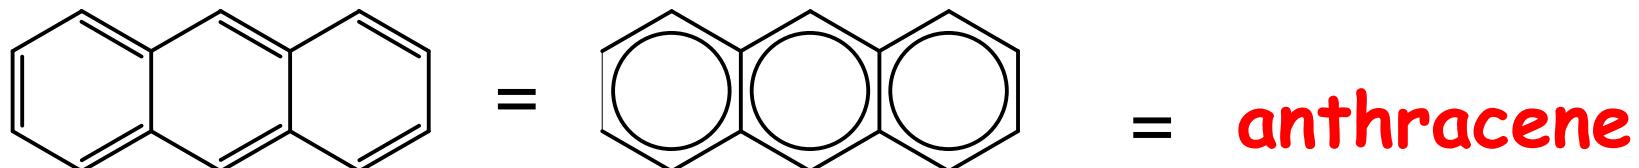

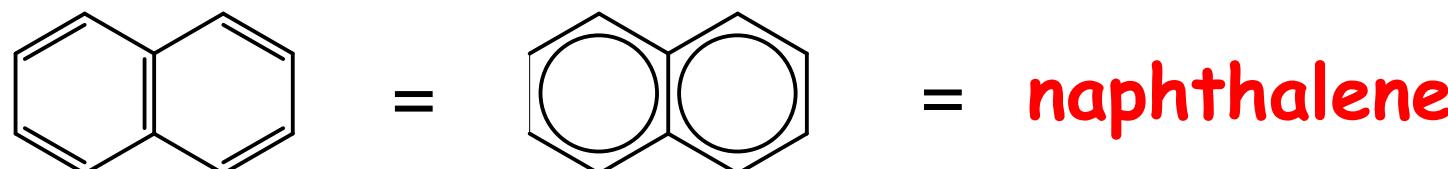

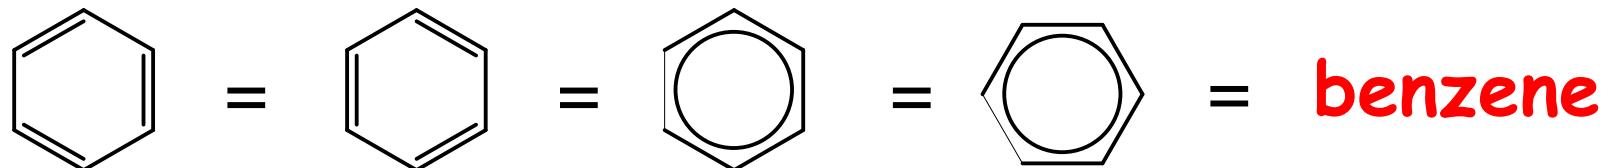

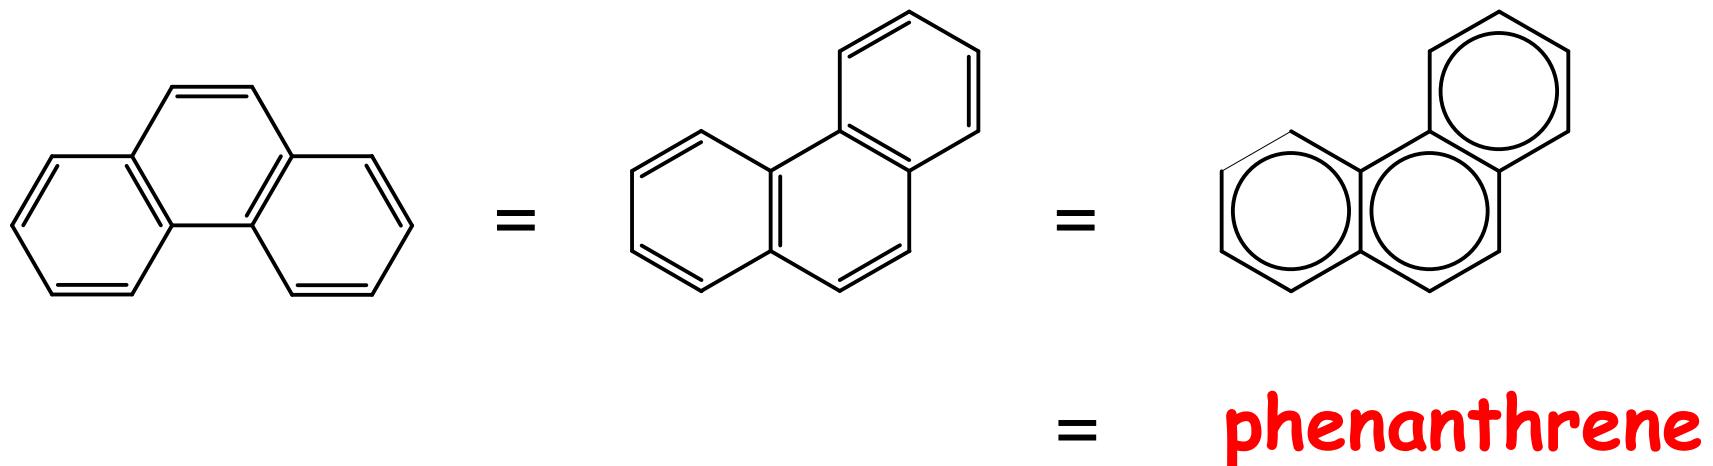

- Hückel rule:

$$n = 1, 2, 3, \dots$$

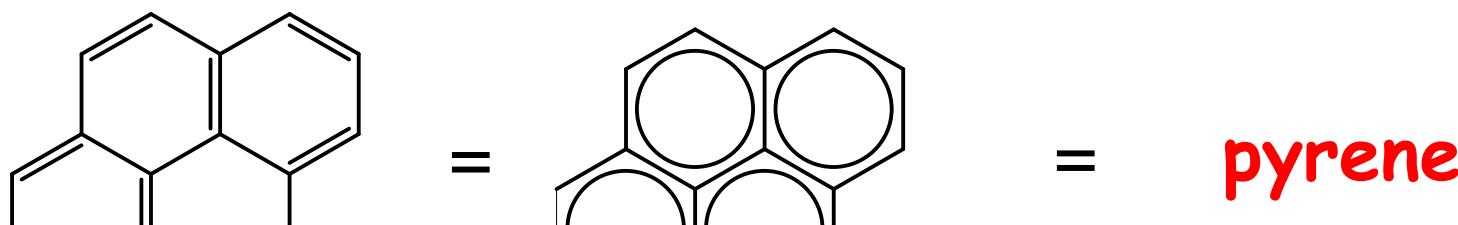

$$4n + 2 = \text{number of } \pi\text{-electrons}$$

Aromatic hydrocarbons (= arenes)

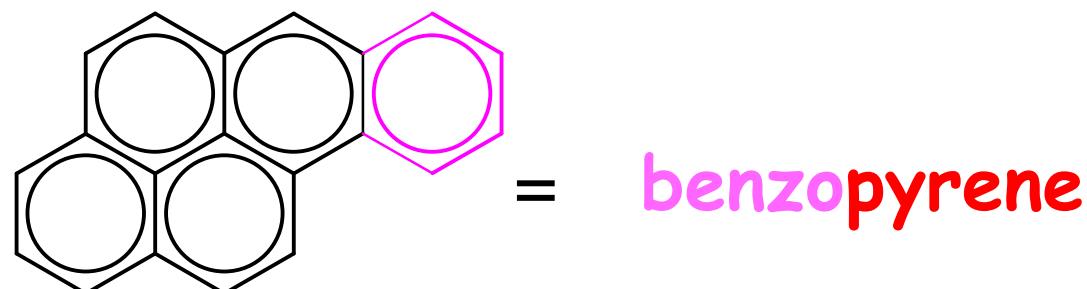

phenanthrene

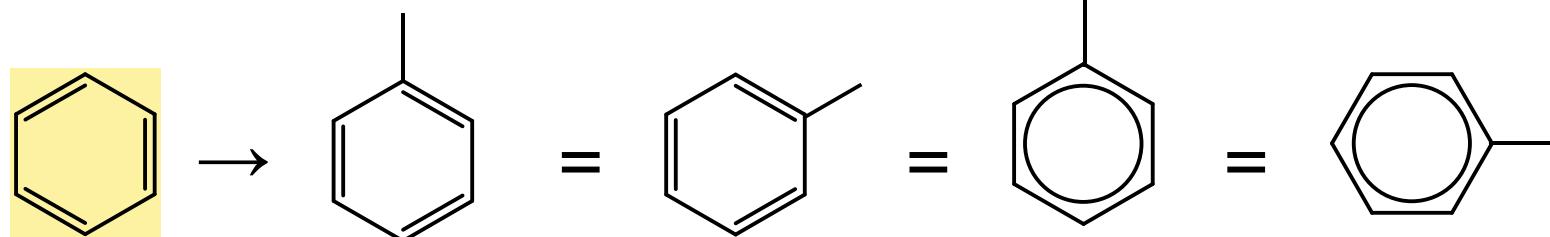

pyrene

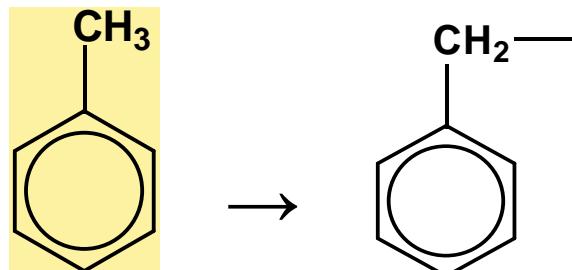

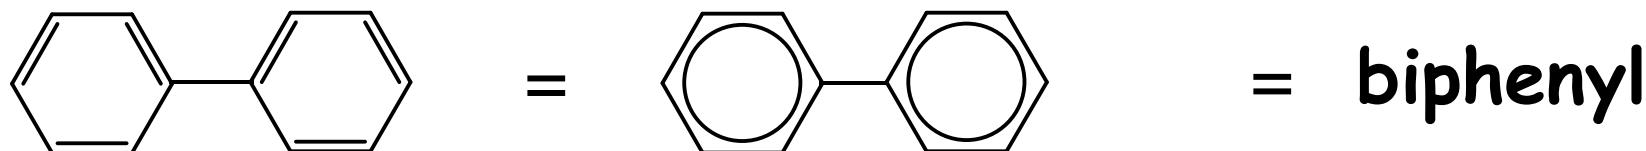

benzopyrene

Hydrocarbon rests of arenes (**aryls**, Ar)

DERIVATIVES OF HYDROCARBONS

The name of the compound is derived from
the name of the basic unbranched hydrocarbon

- principal functional group
 - ⇒ type of the derivative ≈ **suffix**
- other functional groups
 - expressed by special **prefixes + locants**

small molecule is released)

4. **rearrangement** (= formation of an isomer)
